PART 1 - GENERAL

A. Description

This section includes materials, installation, and testing of backflow prevention assemblies.

B. Related Work Specified Elsewhere

All related work specified elsewhere, or in other codes or standards, will be as last revised, unless a specific date of issuance is called out in opposition to later revision date(s).

Other sections of the technical specifications, not referenced below, shall also apply to the extent required for proper performance of this work.

1. Concrete: 03300
2. Ductile-Iron Pipe and Fittings: 15056
3. Copper, Brass, and Bronze pipe, Fittings, and Appurtenances: 15057
5. Meters: 15150

C. Approved Assemblies

The backflow prevention assembly shall be included in the latest edition of the "List of Approved Backflow Prevention Assemblies," Foundation for Cross-Connection Control and Hydraulic Research, University of Southern California, School of Engineering.

D. Application

1. A backflow prevention device shall be installed at all locations where the potential for a backflow condition into the District's domestic water mains exists. The device shall be located immediately behind the meter assembly, or as close as reasonably possible.

2. The type of device required will depend on the level of potential hazard which exists and will be a Reduced Pressure Principle Device (RPP). The fire system protection, RPDA or DCDA, will be as determined by the District.

3. Any service providing domestic water to anything other than a private residential dwelling shall have backflow protection.
E. **Responsibility**

The District will maintain only the by-pass meter and the service from the main to the Public Right of Way or Easement. The owner is responsible for the testing, maintenance and repair or replacement of the device.

**PART 2 - MATERIALS**

A. **Shut-Off Valves**

The shut-off valves for assemblies 3-inch and larger shall be resilient seat gate valves conforming to Section 15100. Ball valves shall be used on assemblies smaller than 3-inch.

B. **Ductile Iron Piping and Fittings**

Ductile iron piping and fittings shall be furnished and installed in accordance with Section 15056.

C. **Concrete**

Concrete thrust blocks and supports shall be in conformance with Section 03300.

D. **By-Pass Piping**

By-pass piping shall be copper or brass conforming to Section 15057.

E. **Backflow Prevention Assembly**

All backflow prevention assemblies shall conform to the latest edition of AWWA C506 and the "Manual of Cross-Connection Control," Foundation for Cross-Connection Control and Hydraulic Research, University of Southern California, School of Engineering.

F. **By-Pass Meter**

The by-pass meter shall conform to the requirements of Section 15150 and shall be sized and compatible with the backflow device on which it is installed. The backflow prevention assembly and the by-pass meter shall be furnished as one complete unit. All by-pass meters shall be per the VWD Approved Material List, latest edition, with registers reading in cubic feet.

**PART 3 - EXECUTION**

A. **Installation**

Installation of the double detector check assembly or the reduced pressure principle assembly will be per VWD standard drawings W-12, W-13 or W-19, and as noted below.

1. Installation shall comply with the latest plumbing codes and applicable local agency requirements.

2. Installation shall comply with the requirements of the latest District standard drawings.
B. Testing

Upon completion of the installation of the device, a test shall be performed and a certificate of the adequacy and operational compliance shall be furnished to the District. The tests shall be performed by a testing agency or tester approved by the District.

END OF SECTION
